

Key

Lagranja , 2007

KEY IS A BICYCLE RACK WITH SIMPLE AND FRIENDLY FORMS, KEY IS AN OCCASIONAL GAME. ITS STRUCTURE, MANUFACTURED IN HIGH-DENSITY POLYURETHANE FOAM, GENERATES A BODY WHICH IS PLEASANT TO THE TOUCH, DESIGNED TO HUMANIZE THE HARSHNESS OF THE CITY

- Easy to install
- No maintenance
- Body pleasant to the touch
- Colours

Key bicycle rack

A young and dynamic bicycle rack which updates an urban element which is increasingly necessary in our cities. An element which is safe and respectful of pedestrians thanks to its morphology and its pleasant character, and at the same time useful and prepared for continuous use.

Key is a bicycle rack with simple and friendly forms. Its circular shape and its colours harmonize the urban paving; it has a robust appearance but is soft to the touch. Its structure, manufactured from high-density polyurethane, generates a flexible body, capable of softening the solid character of the city. It works individually or forming groups.

Materials and finishes

Body in complete high-density polyurethane foam, mass-coloured, red or anthracite grey, with an interior structure of steel sections. The base is in powder-painted grey cast aluminium.

Maintenance

Does not require maintenance.

Installation

The element is embedded in the paving with 2 bolts which are introduced into holes previously made and filled with epoxy resin, fast-drying cement or similar. The element is delivered assembled and wrapped. The assembly instructions are enclosed with the bicycle rack.
